(54) Title: METHOD AND APPARATUS FOR PROCESS SYNC RESTART

(57) Abstract: A method and apparatus for process sync restart is described. A computer implemented method comprises receiving a first set of data from a network process, determining death of the network process (1101), clearing the first set of data if a time period expires (1109), and synchronizing the first set of data with a second set of data if the time period does not expire, the second set of data received from the network process after the network process restarts.
