AIRCRAFT PASSENGER SEAT

Abstract

An aircraft passenger seating arrangement comprises a seat (3) having a seat pan (3b) and a seat back (3a), the seat being able to adopt a first, substantially upright sitting position and a second, sleeping position in which the seat back (3a) and seat pan (3b) are substantially horizontal, the arrangement further including a side surface (5b) arranged to form part of a substantially flat, horizontal sleeping surface alongside the seat.
