(54) **Title:** SUPPORTING SYSTEM FOR A HEATING ELEMENT

Fig. 1

(57) **Abstract:** The invention relates to a supporting system for support of a heating element which comprises a supporting member and a base member. The supporting member has a main extension direction extending substantially in a height direction and a proximal and distal end whereas the proximal end is adapted to support the heating element. The base member is connected via at least one hinge to a distal portion of the supporting member which distal portion is arranged distal from the proximal end. The supporting member is pivotable relative to the base member about a rotation axis which is oriented parallel to a substantially rigid direction.
