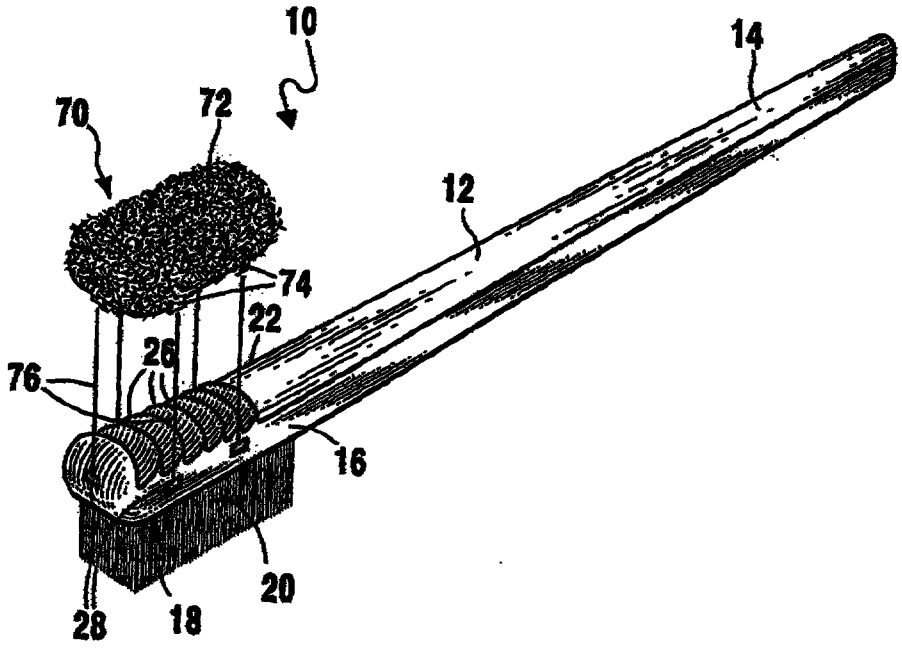
(54) Title: ALL-SIDED MOUTHBRUSH

(57) Abstract


An all-sided mouthbrush (10) for cleaning a mouth of a user. The all-sided mouthbrush (10) includes a handle (12) having at a second end (16) first (18) and second (22) sides, bristles (20) extending from the first side (18), and an alternate cleaning device (24) connected to the second side (22), wherein the bristles clean teeth of the user and the alternate cleaning device cleans a tongue and inner side of the mouth of the user. The alternate cleaning device may be in the form of one of a plurality of parallel ridges (26), a plurality of columns of tuft-shaped bristles (32), a plurality of spade headed bristles (36), a scouring pad-like surface (72) or a plurality of off set rows of bristle-like structures made of soluble crystals (80) for scraping the tongue and inner side of the mouth of the user. A plurality of templates each including a respective alternate cleaning surface and a connecting device for connecting one of the plurality of templates to the second side covering said alternate cleaning device may be attached to the all-sided mouthbrush. A resealable packet (94) is provided for each of the templates and for receiving the first end (14) of the handle when not in use for protecting the templates and handle from contamination. A mouth freshening liquid (92) is provided within the pouches for further protecting the templates and handle and provide additional freshening for the mouth of the user.
