(54) **Title:** INTERFACING SERVICES OF AN APPLICATION DATA ANALYTICS ENABLER SERVER

Figure 3

(57) **Abstract:** Various aspects of the present disclosure relate to interfacing services of an application data analytics enabler server (ADAES). An apparatus, such as a network equipment (NE), receives, from an analytics consumer, a request for analytics data via an application program interface (API). The API can be configured as a single API via which multiple events are accessible, where each of the multiple events are distinguishable by an event-specific identifier. Alternatively, the API can be configured as multiple APIs by which one event of the multiple events is accessible via one of the multiple APIs, and the one event is distinguishable by an API-specific identifier and the event-specific identifier. The NE transmits a response to the request for the analytics data to the analytics consumer.
