

[Title for the Invention]

DISTRIBUTED DATACENTER CONFIGURED WITH CONTAINER-TYPE OR
MODULE-TYPE DATACENTER

5

ABSTRACT

There is provided a distributed datacenter having a central
management center collectively operationally managing a plurality
10 of distributed transportable datacenters from a remote location.
A central management center which can operationally manage a
container-type DC at each location from a remote location is provided,
each location has a local management center having a resource
management table for storing a state of each IT resource owned by
15 the container-type DC installed at each location for operational
management of the container-type DC, and the IT resource owned by
the container-type DC operationally managed by a local management
center at a first location is used by a local management center at
a second location via the central management center.
