(54) **Title:** DEVICES, METHODS, APPARATUSES, AND COMPUTER READABLE MEDIA FOR UPLINK TRANSMISSION DURATION EXTENSION

FIG. 2

(57) **Abstract:** Disclosed are devices, methods, apparatuses, and computer readable media for uplink transmission duration extension. An example apparatus for a terminal device may include at least one processor and at least one memory. The at least one memory may store instructions that, when executed by the at least one processor, may cause the terminal device at least to: receive from a network device, at least one first indication indicating whether allowing the terminal device to extend an uplink transmission duration, during which uplink transmission is allowed, after expiry of a position validity duration; and perform one of the following: extending the uplink transmission duration according to the at least one first indication if the at least one first indication allows the terminal device to extend the uplink transmission duration, until receiving from the network device a second indication indicating the terminal device to stop the uplink transmission duration, or extending the uplink transmission duration according to each of received multiple first indications if

said each of the received multiple first indications allows the terminal device to extend the uplink transmission duration, and stopping the uplink transmission duration when the uplink transmission duration extended according to said each of the first indications expires.
