

METHOD FOR PICTURE DECODING, DECODER, AND COMPUTER STORAGE MEDIUM

ABSTRACT

A method for picture decoding, a decoder, and a computer storage medium are provided. The method includes the following. A bitstream corresponding to a current picture is acquired. The bitstream is parsed to obtain a flag corresponding to the current picture. A cross-decoding function is disabled when a decoding manner indicated by the flag is independent decoding of colour components, where the cross-decoding function allows decoding based on dependency between colour components.
