

INTRADERMAL ADMINISTRATION OF IMMUNOGLOBULIN G PREPARATION

ABSTRACT

A method for administration of an IgG preparation by an intradermal (ID) route to a subject in need thereof includes loading with a volume of the IgG preparation an ID delivery device including needles, applying the device to a skin delivery site, using the device to allow dermal penetration of the needles, delivering the volume of the IgG preparation at the skin delivery site, and removing the injection delivery device. Compositions of an IgG preparation are for use in the treatment of a disease in a subject in need thereof by the above method. The disease can be an immunodeficiency.
