ABSTRACT

5 A flat monitor support apparatus for association
with an aperture in a working platform. The support
apparatus includes an aperture frame that extends about
perimeter portions of the aperture, a flat monitor
support tray positioned within the aperture frame, and
support elements for supporting the flat monitor support
tray by the aperture frame while the aperture frame is
associated with the platform aperture. The aperture
10 frame, the flat monitor support tray, and the support
elements co-act to support a flat monitor.
