

ABSTRACT

The present invention relates to a method for determining an electric energy value by considering electric energy usage statistics in an EV eco-system, and a device for performing the method. The method for determining an electric energy value by considering electric energy usage statistics in an EV eco-system may comprise steps in which an EV eco-system management device: determines electric energy usage statistics on the basis of EV eco-data received from each of a plurality of EV charging stations; and determines, by time period, the price at which electric energy is to be sold at each of the plurality of EV charging stations.
