

ABSTRACT

A pump-equipped container and a dispensing pump used therefor are provided, such that a thin container body can be implemented, while deformation of the container body associated with an operation portion being pushed down can effectively be prevented. A pump-equipped container 1 includes: a container body 2 having a mouth portion 15; and a dispensing pump 20 removably attached to the mouth portion 15. The dispensing pump 20 includes: a pump body 22 removably attached to the mouth portion 15 of the container body 2; a support member 31 having its bottom end portion abutted on a bottom portion 5 of the container body 2 to thereby receive a downward load acting on the mouth portion 15 of the container body 2; a leg member 32 provided at the support member 31.
