

ABSTRACT OF THE DISCLOSURE

A method for implementing the circle store in the air and the device thereof are provided. The device is a dual interface telecom smart card with the payment function and is installed in a mobile phone. The holder of the mobile telephone initiates the circle store operation, inputs the transaction amount and sends the circle store initialization command to the operation system of the card by STK, and after the operation system of the card returns the corresponding data, the STK sends the short message of the circle store request to the server; after receiving the short message of the circle store request, the server deducts the circle store funds from the corresponding account after the validation and sends the short message of performing the circle store command; the dual interface telecom smart card sends the circle store command to the operation system of the card after it receives the command of performing the circle store. After the validation, the electronic purse adds the money and returns the corresponding data to the STK, and the STK sends the circle store result short message to the server.
