(54) Title: DEVICE FOR EXTEMPORANEOUSLY PREPARING A HOT BEVERAGE FROM A SOLUBLE POWDER

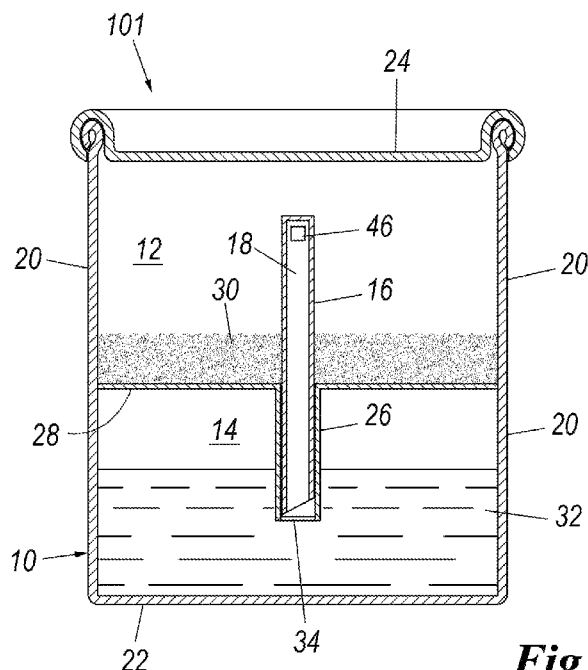

Fig. 1

(57) Abstract: The device (101, 201, 301, 401) for extemporaneously preparing a hot beverage (40) anywhere and anytime from a soluble powder comprises a container (10) which is divided into an upper hollow space (12) and a lower hollow space (14) by a baffle (28). The lower hollow space (14) contains a quantity of drinkable liquid (32) and the upper hollow space a quantity of soluble powder (30) able to produce said beverage (40). An elongated hollow element (16, 26) is provided, which is open at its two ends and which connects the lower (14) and the upper (12) hollow spaces, sealing means are provided for sealing the connection between the upper (12) and the lower (14) hollow spaces through the elongated element (16, 26). The sealing means can be made ineffective by intervention of the user or once a predetermined pressure inside the liquid or a predetermined temperature have been reached.
