

HOLDER FOR MATERIAL FOR INCREASING HAIR VOLUME

ABSTRACT

Provided is a holder for a material for increasing hair volume configured so that a practitioner can quickly retrieve the material for increasing hair volume, thereby increasing work efficiency while working. The holder (10) comprises: a rectangular base sheet (11); a rod-like member (13) that is disposed on the base sheet (11), and has a plurality of strands of the material for increasing hair volume positioned at prescribed intervals; and a first holding member (15) that is disposed on the rod-like member (13), and holds bundles of the material for increasing hair volume. The first holding member (15) comprises: an adsorption surface (15a) for adsorbing the material for increasing hair volume; and a sliding surface (15b) for facilitating the retrieval of the bundles.
