

ABSTRACT

COMPONENT ADHERING APPARATUS AND

A CONVEYING METHOD THEREOF

A component adhering apparatus and a conveying method
5 thereof which includes providing an base component, and
carrying the base component by a conveying device in a
reciprocating movement; providing a plurality of adhering
components, and feeding the adhering components by feeding
devices to a pick-up part; and picking up the adhering
10 component from the pick-up part by a transfer device,
transferring the adhering component to a working position,
and adhering the adhering component on the base component
at the working position. The method can be automatically
carried out on a machine base to greatly improve the process
15 efficiency and product quality.
