

Abstract

AN ERODIBLE ANTIFOULING COATING COMPOSITION

- 5 An erodible antifouling coating composition for application, for example, to ship's hulls to potentially prevent the adhesion and build up of fouling agents on the hull is described. The coating composition comprises an erodible binder system excluding a triorgano tin based binder; optionally, one or more antifouling agents; and at least one silicone oil. A process for producing the composition, a substrate coated with the
- 10 composition, and a process of coating a substrate with the composition are also described.
