(54) Title: FLIGHT SELECTION METHOD

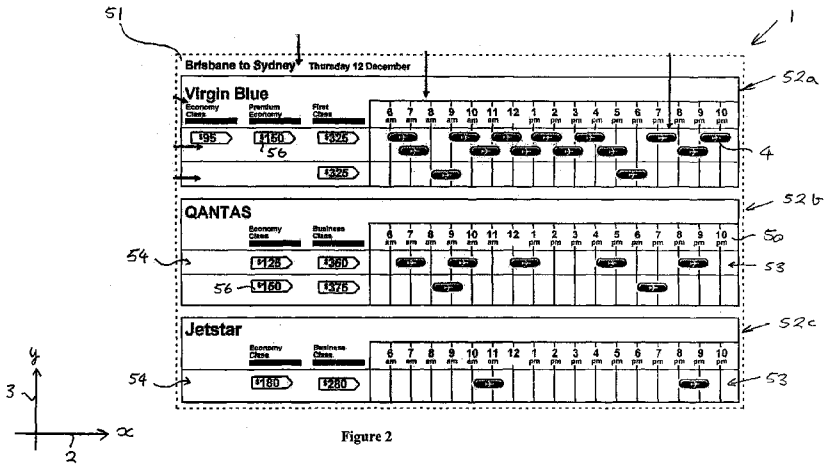

Figure 2

(57) Abstract: The present invention relates to a flight selection method using a computerised device. The method includes the step of processing flight data relating to flights to produce display data. The display data is displayed by a remote computer in accordance with a flight search query. The display data includes flight representations displayed relative to a timeline. At least one flight representation is associated with more than one fare indicator to provide for a more compact display of flight information.
