Claims

1. A high-security seal dispensing machine, comprising a main box (1), wherein an outer wall at a front end portion of the main box (1) is provided with a first switch door (3), an outer wall on one side of the main box (1) is provided with an air conditioning position (6), front end portions of an outer wall on one side of the air conditioning position (6) are provided with two auxiliary mounting plates (7), rear end portions of an outer wall on one side of the air conditioning position (6) are provided with mounting holes (9), an upper end portion of the main box (1) is provided with a top plate (10), a rear end portion of one side of an outer wall of the main box (1) is provided with a display screen (11), end portions of an outer wall of the main box (1) away from the display screen (11) are respectively provided with an auxiliary screen (12), a scanner (13), a pickup port (14) and a control interface (15), an outer wall of a rear end portion of the main box (1) is provided with a third switch door (16), a bottom surface inside the main box (1) is provided with a power box (18), inner walls of the main box (1) are provided with OCR support frames (19), and lower end portions of the OCR support frames (19) are provided with servo motors (20);
   outer walls on both sides of the OCR support frames (19) are provided with first conveyor belts (21); and
   outer walls of front end portions of the OCR support frames (19) are provided with a plurality of belt conveyor cargo lanes (22).

2. The high-security seal dispensing machine according to claim 1, wherein at a lower surface of the main box (1) are provided a plurality of fixing frames (2).

3. The high-security seal dispensing machine according to claim 1, wherein on one side of an outer wall of a front end portion of the first switch door (3) are provided two first locks. (4)

4. The high-security seal dispensing machine according to claim 1, wherein a middle portion of an outer wall of a front end portion of the first switch door (3) is provided at least one first handle (5).

5. The high-security seal dispensing machine according to claim 1, wherein middle portions of an outer wall on one side of the air conditioning position are provided mounting slots (8).

6. The high-security seal dispensing machine according to claim 1, wherein inner walls of the main box (1) are provided with reinforcement frames (17).
