(54) Title: METHODS AND SYSTEMS FOR DETERMINING SEGMENTATION RULES FOR CATEGORISING ENTITIES

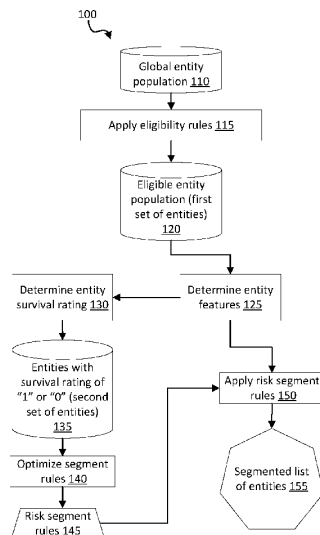

Figure 1

(57) Abstract: Described embodiments relate to determining segment rule(s) for categorising entities according to financial risk comprising determining, for each entity, feature(s) indicative of financial risk, determining a survival rating for each entity based on determined entity attributes; and providing, as input to a segmentation rules determination module, the feature(s) and the survival rating for a subset of the entities of the second set of entities. Described embodiments further comprise modifying, by the segmentation rules determination module, a set of segment rules until a completion condition is met and determining as output of the segmentation rules determination module, the segment rule(s).
