(57) Abstract: Binding proteins comprising a VL region paired with a VH region, and a CH1 region paired with a CL region, wherein the VL region and VH region comprise opposite charged mutations to facilitate pairing, and wherein the CH1 region and CL region comprise mutations to facilitate pairing, are provided. Binding proteins comprising one or more cysteine residues engineered into the VH/VL pair to form one or more disulfide bonds, are also provided. Multispecific binding proteins, nucleic acids encoding binding proteins and multispecific binding proteins, expression vectors, host cells, pharmaceutical composition and methods of treatment administering the binding proteins or multispecific binding proteins described herein are also provided.
