Abstract

The present invention relates to a system and method for managing a golf range. The system for managing a golf range having a plurality of bays, in accordance with the present invention, includes an assignment server for assigning the plurality of bays to assignees, a management server for receiving assignment information from the assignment server, calculating earnings of respective assignees based on the management information for management of the golf range, and providing information about earnings calculated for the respective bays, and a plurality of assignee terminals connected to the servers and configured to be assigned desired bays by the assignment server, and request and receive management information regarding their assigned bays. Accordingly, since the present invention assigns respective bays of the golf range, the assignees of the bays can be individual entrepreneurs, so that a tax reduction effect can be achieved and the present invention can attract individuals who can invest small amounts of money in large golf ranges.
