(54) Title: SUPPORTING DEVICE FOR DISPENSING VOLATILE MATERIAL

(57) Abstract

A device (10) supports and dispenses volatile materials. The device is self-supporting and has a tent-like configuration. It can be hung from a bar. One of its side panels is connected to another by a tab and slot, or tab and pocket, arrangement above a base (16). The base connects the side panels (18, 19). There is a reservoir (20) for dispensing the volatile material which is mounted on one of the side panels, with a rear of the reservoir being positioned between two of the panels above the base.
