WHAT IS CLAIMED IS:

1. A processing apparatus comprising:

a chuck table for holding a workpiece;

a processing unit for processing the workpiece held on the chuck table;

a touch panel for entering processing conditions; and

a control unit for controlling the touch panel, wherein

the control unit

controls the touch panel to display a plurality of input fields corresponding to a plurality of items included in the processing conditions,

controls the touch panel to display a copy processing key and a paste processing key when one of the input fields is selected,

copies information entered in the selected one of the input fields when the copy processing key is selected, and

enters information that has been copied in advance into the selected one of the input fields when the paste processing key is selected, wherein

the control unit

controls the touch panel to display a transcription processing key when the one of the input fields is selected and display an input section including

a plurality of input keys used to enter information into the plurality of input fields and an information input field, the input section also functioning as a calculator, and

enters information entered in the selected one of the input fields into another one of the input fields when the transcription processing key is selected.

2. The processing apparatus according to claim 1, wherein

the control unit

controls the touch panel to display an input section including a plurality of input keys used to enter information into the plurality of input fields and an information input field, the input section also functioning as a calculator, and

enters information entered in the selected one of the input fields into the information input field when the copy processing key is selected with the one of the input keys being selected and the paste processing key is thereafter selected with the information input field being selected.

3. The processing apparatus according to claim 1, wherein

the control unit

controls the touch panel to further display one or more history transcription processing keys for

displaying information previously entered in the one of the input fields when the one of the input fields is selected, and

enters information displayed in one of the history transcription processing keys into the selected one of the input fields when the one of the history transcription processing keys is selected.

4. The processing apparatus according to claim 1, wherein

the copy processing key and the paste processing key are selected by a flicking action.
