

**APPARATUSES, COMPUTER-IMPLEMENTED METHODS, AND COMPUTER
PROGRAM PRODUCTS FOR IMPROVED MONITORED BUILDING
ENVIRONMENT MONITORING AND SCORING**

Abstract

The present disclosure provides embodiments for improved monitoring of building environments and scoring of various aspects associated therewith. An example apparatus includes at least one processor and at least one memory that are configured in execution to receive, via a plurality of environment monitoring sensors positioned in at least one monitored building environment, building monitoring data. The example apparatus is further configured to determine, for the at least one monitored building environment and based on the building monitoring data, a building operations score set corresponding to a building operations metric set. The example apparatus is further configured to determine, for the at least one monitored building environment, an overall building operational score based on the building operations score set.
