

## ABSTRACT

5        Provided are: a perfluoroelastomer composition which contains 100 parts by  
weight of a perfluoroelastomer containing a constituent unit derived from  
tetrafluoroethylene, a constituent unit derived from a perfluoro(alkyl vinyl ether) or a  
perfluoro(alkoxyalkyl vinyl ether) and a constituent unit derived from a nitrile  
group-containing perfluorovinyl ether, greater than or equal to 1 part by weight and less  
10        than 25 parts by weight of a fluoro resin and a specific crosslinking agent; a sealing  
material which is formed of a crosslinked product of this perfluoroelastomer  
composition; and a method for producing this sealing material.
