

Abstract of Eco Burner:

OUR REF: EET-AC-P-A-2011

YOUR REF: 2013-088802

Incense burning have been a common religious practice throughout the past few decades.

However during the burning it contributes environmental pollution factor causing unpleasant moments and risking health safety concern for other.

Burning particles tends to roams freely during burning process and with raging flames, they will increase the risk of fire safety hazards.

Difference racial groups are affected by awkward situations that arise from incense burning process, thus resulting in poor harmony coordination cause by individual practices.

Eco Burner was invented to address the problem causes by burning process. Its unique design enable it to control and contain pollution contributing factor to the environment. Merging with physic principle the burner has the capability to increase burning efficiency and promote a shorter and complete burning process.
