G00002

Summary

Invention concerns a semi-automatic handheld firearm with a rigid barrel (1) with a cartridge chamber (3), a lock head (11) that is lockable with respect to the barrel (1), and a lock mount (13) that is moveable relative to the lock head (11), on which a recoil spring (9) is mounted. Thereby, an additional, powerful spring mechanism (17, 41) is arranged between the lock mount (13) and the lock head (11), via which the (heavy) lock mount (13) is supported on the latter when the lock head (11) is locked.
