

Title of the Invention: INFORMATION PROCESSING DEVICE,
INFORMATION PROCESSING METHOD, PROGRAM, AND INFORMATION
PROCESSING SYSTEM

ABSTRACT

The objective of the present invention is to enable employees or the like to share information appropriate to a participation location (internal or external meeting, for example) with other employees while active throughout the day, thereby achieving efficiencies in business conducted in a company organization or the like, invigorating communication, and optimizing the lifestyle of the employees. A server 1 collects individual information relating to the employees or the like, to support improvements in the efficiency of businesses processes performed by the employees or the like. The server 1 invigorates communication by sharing information between the employees or the like. Further, the server 1 ascertains the personal information relating to the employees or the like in accordance with the connection status of terminals owned by each employee or the like, to resolve issues related to mental health and labor issues. Further, the server 1 automatically activates a meeting support function from the schedule of the employees or the like, to support the progress of meetings held by the employees or the like.
