

A B S T R A C T

DISPENSING CONTAINER FOR WET TISSUE

A dispensing container 1 for wet tissues provided with a stationary lid 4 and a pivotal lid 6 pivotally supported on the stationary lid 4. The pivotal lid 6 is received by a trough-like region formed in the stationary lid 4 as the pivotal lid 6 is swung down to its closure position. The pivotal lid 6 is formed on its upper surface with a display pocket 17 consisting of a transparent sheet 18 mounted on the upper surface of the pivotal lid 6 so as to leave a space between the transparent sheet 18 and the upper surface of the pivotal lid 6, into which a sheet to be displayed, for example, a photo can be removably inserted. The display pocket 17 has a photo insertion slit 21 opened toward one of side walls 13 defining the trough-like region of the stationary lid 4, which closely faces the photo insertion slit 21.

Refer to Fig. 3.
