

Lighting Control Device for an Elevator

ABSTRACT

5

A lighting control device for an elevator according to the present invention comprises a lighting device (1), a control device (2) coupled to the lighting device (1), and a manipulator (3) for controlling operation of the control device (1), wherein the lighting control device for the elevator is configured such that depending on operation of the
10 manipulator (3), the control device (2) is controlled so as to adjust the illumination intensity and colour of the lighting device (1). Therefore, the illumination intensity and colour of the lighting device can be adjusted so as to improve lighting decoration effects.
