(54) Title: METHOD FOR INPUTTING CHARACTERS IN ELECTRONIC DEVICE

(57) Abstract: According to an aspect of the invention, an enhanced audible feedback solution has been invented for electronic devices using an input device facilitating navigation through a plurality of available user interface input options and confirmation of a selected input option. The electronic device is arranged to define, as a response to detecting a selection of a character (304) on the basis of a detection of a first input to an input device of the electronic device, an audio segment specific to the character (306). The electronic device is arranged to output the defined audio segment (308) via the audio output means prior to a confirmation (310) by a second input to the input device, the second input being associated with a function adding the character as part of a character sequence (312) entered by the user.
