(54) Title: FREQUENCY HOPPING AND APPARATUS, AND USER EQUIPMENT, BASE STATION AND STORAGE MEDIUM

(54) 发明名称: 一种跳频方法、装置、用户设备、基站及存储介质

图 1

(57) Abstract: The present disclosure belongs to the technical field of communications. Provided are a frequency hopping method and apparatus, and a user equipment, a base station and a storage medium. The method comprises: acquiring an instruction which is configured by a base station and is used for instructing to perform intra-slot frequency hopping, and acquiring a symbol resource in a special slot, which symbol resource is allocated by the base station and is used for data transmission; performing intra-slot frequency hopping in an uplink slot, and determining an available symbol in the special slot; and performing intra-slot frequency hopping on the available symbol in the symbol resource, or not performing intra-slot frequency hopping in the special slot. By means of the method provided in the embodiments of the present disclosure, resource waste can be avoided, thereby saving on costs, and ensuring the stability of frequency hopping.

(57) 摘要: 本公开提出一种跳频方法、装置、用户设备、基站及存储介质, 属于通信技术领域。其中, 该方法包括: 获取基站配置的用于指示进行时隙内跳频的指令, 以及获取所述基站分配的special slot特殊时隙中用于数据传输的符号资源; 在上行时隙进行时隙内跳频, 并确定special slot中的可用符号; 在所述符号资源中的可用符号上进行时隙内跳频, 或者, 在special slot中不进行时隙内跳频。本公开实施例提供的方法可以避免资源的浪费, 节约了成本, 且确保了跳频的稳定性。
