(54) Title: A SYSTEM FOR DELIVERING SCENARIO SPECIFIC, PROBLEM SOLVING, DECISION SUPPORT FROM NON-INTELLIGENT COMPUTER SYSTEMS

(57) Abstract: A computational decision making system is provided for delivering scenario specific information. Each decision making scenario has a number of variables associated with it and variable values. The system matches a set of input variables to the grouped data objects to find a match or the closest matching grouped data object or objects. Decision information embodying the outcome of a decision making process is associated with each grouped data object and the said decision information associated with the best matching grouped data object or objects is outputted.
