

**Title of the Invention: SYSTEM AND METHOD FOR CULTURING AND
TRANSPORTING AQUATIC ANIMALS**

Abstract

Embodiments of the invention provide an environmentally friendly and cost-
5 effective modular tank, system and method for culturing and transporting aquatic
animals. The modular tank comprises an inner sidewall and an outer sidewall,
wherein a closed space is formed between the inner sidewall and the outer
sidewall to hold the aquatic animals, and the inner sidewall with at least one
opening thereon forms a channel to allow an automated aquaculture system to be
10 in fluid communication with the closed space. The system includes a plurality of
modular tanks which are arranged in such a manner that the channels of the
plurality of modular tanks are substantially aligned with each other to allow the
automated aquaculture system to be installed therein.
