

MESSAGE CHAIR APPARATUS

ABSTRACT

There is provided a message chair apparatus including a leg massager with which a user is able to have any area of their leg such as foot, calf, and thigh massaged while sitting in a chair, etc.

In a message chair apparatus (70), a footrest portion (73) is built as a leg massager (1) for massaging user's leg. The leg massager comprises: a lower massaging system (37) for massaging a message target area of user's leg, which includes at least foot; an upper massaging system (11) for massaging an upper message target area located above the message target area which is massaged by the lower massaging system (37); a drive mechanism (23) for driving the upper massaging system (11) and the lower massaging system (37); and a rockably supporting section (30) for supporting upper massaging system (11) for rocking motion about a horizontal-pointing axis.
