

ANTI-FOULING COATING MATERIAL COMPOSITION

ABSTRACT

Film dissolution property of conventional antifouling coating film was extremely low, and thus it was difficult to exhibit antifouling property for a long period of time.

According to the present invention, an antifouling coating composition comprising polymer A and antifouling agent; wherein the polymer A is a copolymer of monomer (a) and ethylenically unsaturated monomer (b) other than the monomer (a); and the monomer (a) is represented by general formula (1), is provided.
