

ABSTRACT

SYSTEM FOR SECURING A SCREEN DOOR MODULE TO A PLATFORM AND
ASSOCIATED ERECTION METHOD

The system for fixing a screen door module (2) to a platform (11) extending along a track and comprising at least one upright (22) at each end and a sill (7) between the end uprights, comprises:

- a first platform-edge plate (61),
- a second platform-edge plate (61'),
- a first base (62) mounted fixedly on one (61) among the first and second platform-edge plates,
- a second base (63) mounted movably on the other (61') among the first and second platform-edge plates with a translational movement in a direction parallel or tangential to the track, and in a direction of moving towards, or moving away from, the first base,
- means (64,642,65) for fixing and adjusting the end uprights on the first and second bases
