

TRAVELING VEHICLE SYSTEM

ABSTRACT

A traveling vehicle system (1) includes a plurality of traveling vehicles (5), a first route (11A) capable of entering a first area (A1), a second route (11B) capable of exiting from the first area (A1), and a traveling vehicle control unit (76) that controls the traveling vehicle (5) so as not to enter a non-travelable section. As a result of setting at least a part of one of the first route (11A) and the second route (11B) as the non-travelable section, when the traveling vehicle (5) cannot enter the first area (A1) or exit from the first area (A1), the traveling vehicle control unit (76) additionally sets at least a part of the other of the first route (11A) and the second route (11B) as the non-travelable section, and causes the traveling vehicle (5) not to be able to exit from the first area (A1) or enter the first area (A1).
