

SHORTCUT PROCESSING METHOD AND DEVICE

ABSTRACT

This specification provides a shortcut processing method and device, and relates to the field of Internet technologies. According to the shortcut processing method and device provided in this specification, operation data of a current service provided by a network platform is obtained; whether a shortcut of the current service needs to be created on the network platform is determined based on the operation data of the current service; and the shortcut of the current service on the network platform is generated if the shortcut of the current service needs to be created. According to the technical solutions of the embodiments of this specification, an operation time of the user can be reduced, and a repeated operation procedure is avoided, to improve operation efficiency of the user for a common service of the network platform.
