

Abstract

The invention relates to disposable packaging (1) for at least one contact lens (2). The disposable packaging (1) has at least one molded structure (3) which forms at least one product cavity (4) for accommodating the contact lens (2). The molded structure (3) has at least one cleaning chamber (6) having a cleaning system (7) for cleaning and/or disinfecting fingers. The cleaning system (7) comprises a cleaning pad (8) which absorbs and holds cleaning and/or disinfecting agent, the cleaning pad (8) being fixed in the cleaning chamber (6) and the surface of said pad being exposed when the cleaning chamber (6) is opened.
