

ABSTRACT

A method, performed by an electronic device, of mediating information related to transfer of assets includes receiving first information related to a request for the transfer of the assets from a first user of a first exchange to a second user of a second exchange, freezing a portion corresponding to the assets for which the transfer is requested from a reserve fund of the first exchange, based on the first information, transmitting the first information to the second exchange, and performing a settlement process based on second information corresponding to a result of the transfer of the assets.
