[ABSTRACT]

A violator identification device (10) that is configured to identify a violator associated with travel of a vehicle includes: a vehicle identification information acquiring unit (100) configured to acquire vehicle identification information which is able to identify the vehicle in which the violator rides from an image captured by a roadside camera (125); a personal information acquiring unit (103) configured to acquire personal information correlated with the vehicle identification information from a database (13) which is provided in a system that is configured to provide services for vehicles; and an output unit (104) configured to output violation information in which the image and the personal information are correlated.
