(54) Title: A FAN WITH LIGHTING EFFECT

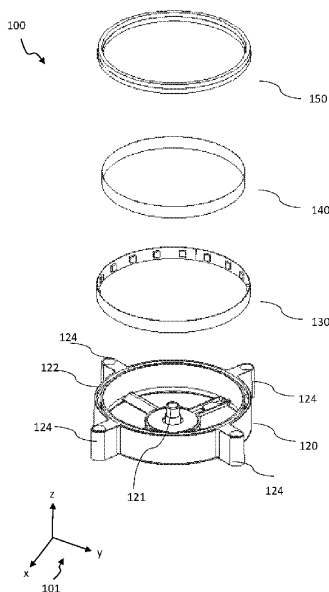

FIG. 2

(57) **Abstract:** In some aspects, a fan with lighting effect includes a fan blade assembly, a fan frame, a light emitting module, a reflector and a light guide. The fan frame has a periphery structure radially disposed to surround the fan blade assembly, the periphery structure having an inner wall and an outer wall defining a slot therebetween. The light emitting module is disposed in the slot and oriented to emit light along a light path non-parallel with the rotational axis of the fan blade. The reflector is disposed in the slot and in the light path of the light emitting module for reflecting the light emitted by the light emitting module. The light guide is fitted to the slot in a manner to guide light to exit from the slot via the slot opening.
