(54) Title: METHOD AND SYSTEM FOR CONFIGURING AN INTERIOR OF A RECONFIGURABLE VEHICLE

FIG. 2

(57) Abstract: Method for configuring the interior of a reconfigurable vehicle using cabin modules, comprising: - providing, by a user interface system (30), cabin configuration options to a plurality of users for selection so as to generate selection data indicative of configuration options, - determining an availability of configuration options based on inventory data which relates to types of configurations of cabin modules that are currently available for use so as to generate availability data, - generating a forecast of cabin modules predicted to be loaded on the reconfigurable vehicle based on the selection and availability data, - updating the availability and selection data substantially in real time based on the inventory data and user input so as to generate updated availability and selection data, - modifying the forecast based on the updated availability and selection data, - finalizing the forecast so as to generate commissioning data indicative of cabin modules to be loaded on the reconfigurable vehicle, - loading the vehicle with the modules and - updating the
