

Double Bearing Reel

Abstract

[Problem] To provide a double bearing reel that allows for good holdability of the side plate on the side opposite to the handle, even when the fisher jerks the fishing rod intensely during jigging and the like.

[Solution] A double bearing reel 1 of the present invention includes: a reel body 2 including right and left side plates; a spool 3 rotatably supported between the right and left side plates; and a handle 5 that is provided on one of the side plates 2B and rotates the spool 3; and a movement restriction portion 20 is provided on an outer circumferential surface 7a of the side plate 7A of the reel body 2 on the side opposite to the handle and prevents the fisher's thumb T2, holding down the side plate, from moving outward from the side plate.
