

ABSTRACT

A carbon dioxide immobilization method includes: impregnating a cured cement body (10) with a carbon dioxide absorbing liquid containing a carbon dioxide absorbent (20) to obtain a cured cement body (1) for carbon dioxide immobilization, in which the
5 carbon dioxide absorbent (20) is supported within the cured cement body (10); and bringing the cured cement body (1) for carbon dioxide immobilization into contact with air to immobilize carbon dioxide contained in the air in the cured cement body (1) for carbon dioxide immobilization.
