

## **WAGERING APPARATUS, METHODS AND SYSTEMS**

### **ABSTRACT**

A system, method and apparatus provides a unique pool betting product where players make selections in a number of different events which occur in sequential legs or time periods. After some and preferably most of the legs have been completed, players who have correct "win" predictions for each of the events or legs that are completed and thus remain in contention for the Jackpot Pool, and potentially those still eligible for consolations prizes, will be offered an opportunity to sell their tickets, in whole or in part, to the game operator or through the game operator.
