# The new type structure of an adapter card

## ABSTRACT OF THE DISCLOSURE

The new type structure of an adapter card in the present invention is an adapter card in combination of memory card specifications and the type of the universal serial bus (USB), wherein a detachable separable block is disposed on one end of the universal serial bus (USB);

By means of temporal removal or stacking insertion said detachable separable block from or on the universal serial bus (USB), the adapter card becomes an integral memory card with dual interface of memory card and the USB in consequence of the terminal to be inserted conforming to and being compatible with the specifications of the USB port;

Moreover, by adopting the material property of the thermoplastic and thermosetting resin in association with manufacturing process, the product quality and the service life are promoted owing to the success and smoothness in assembly and dismantling of said (separable block) being boosted.
