

INFORMATION PROCESSING APPARATUS AND METHOD

ABSTRACT

5 The present disclosure relates to an information processing apparatus and an
information processing method that enable recognition of performance required for
decoding more accurately. A file of an MP4 file format, in which information
specifying a plurality of NAL units corresponding to a partial image which can be
independently decoded in a whole image is stored in moov and the encoded partial
10 image is stored in mdat, is generated, and the generated file is transmitted. The
present disclosure can be applied to, for example, an information processing
apparatus such as an image encoding apparatus or an image decoding apparatus.
